

Andrew Frazier

San Francisco, CA • [LinkedIn](#) • A2drewFrazier@gmail.com

EDUCATION

University of Washington

Seattle, WA

Bachelor of Science, Informatics (Data Science Concentration)

September 2017 – March 2022

TECHNICAL SKILLS

Languages: Python, TypeScript, Java, C#, SQL

Technologies: React, FastAPI, PostgreSQL, Docker, Azure, AWS, .NET

WORK EXPERIENCE

TrainLoop (Y Combinator W25)

San Francisco, CA

Software Engineer (Contract), 4th Engineer

August 2025 – October 2025

- Re-architected core chat memory system from append-only logs into a structured customer-profile layer, designed schemas for goals, projects, entities, and personas and built a two-pass LLM pipeline that extracted, validated, and merged customer signals into queryable profiles.

Microsoft

Redmond, WA

Software Engineer, Azure Database for PostgreSQL

May 2022 – January 2025

- Designed and built an automated incident diagnosis and remediation platform for Azure PostgreSQL, codifying team debugging expertise into a scalable rule engine that root-caused ~10% of production incidents in under 2 minutes, enriched ~70% with targeted diagnostics, and [automatically remediated 100+ replication-related disk-fill failures](#) per month that previously caused hour-plus customer outages and manual on-call intervention.
- Identified a launch-critical scalability flaw in Azure PostgreSQL's upcoming [Autonomous Tuning](#) release, proved through scale testing that the chosen backend would fail under projected adoption, and implemented a parallelized redesign that removed the bottleneck before rollout.
- Defined Azure PostgreSQL's fleetwide availability model and built the health-signal logging and aggregation system across 100,000+ servers, powering SLA heat maps and outage-cause analytics that first surfaced two of the platform's largest major-version-upgrade regressions.
- Built the telemetry and rollout-control layer for Azure PostgreSQL's first global ML-driven feature, an ML backup scheduler predicting low-impact backup windows. Dashboards surfaced effectiveness regressions during canary, drove feature corrections, and enabled safe progression to default-on fleetwide deployment.
- Built the data layer, APIs, and frontend of two customer-facing Azure Portal features, [Query Performance Insights](#) and [Troubleshooting Guides](#); used weekly on 50%+ and 20% of active servers, respectively.

Paul G. Allen School of Computer Science and Engineering

Seattle, WA

Head Teaching Assistant, Data Structures and Algorithms

June 2019 - September 2019

- Designed twice-weekly section materials and coding problems for a ~800-student data structures and algorithms course supported by ~30 teaching assistants.
- Led weekly TA preparation meetings covering section plans, teaching guidance, and common student misconceptions.

Teaching Assistant, Data Structures and Algorithms

September 2018 - June 2021

- Taught twice-weekly section, graded coding assignments, held office hours
- Ranked in top 20% of undergraduate TAs (~50) based on student evaluation scores 6/8 quarters taught
